Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises)

Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises)

Remote Sensing of Drought: Innovative Monitoring Approaches presents emerging remote sensing-based tools and techniques that can be applied to operational drought monitoring and early warning around the world. The first book to focus on remote sensing and drought monitoring, it brings together a wealth of information that has been scattered throughout the literature and across many disciplines. Featuring contributions by leading scientists, it assembles a cross-section of globally applicable techniques that are currently operational or have potential to be operational in the near future.

The book explores a range of applications for monitoring four critical components of the hydrological cycle related to drought: vegetation health, evapotranspiration, soil moisture and groundwater, and precipitation. These applications use remotely sensed optical, thermal, microwave, radar, and gravity data from instruments such as AMSR-E, GOES, GRACE, MERIS, MODIS, and Landsat and implement several advanced modeling and data assimilation techniques. Examples show how to integrate this information into routine drought products. The book also examines the role of satellite remote sensing within traditional drought monitoring, as well as current challenges and future prospects.

Improving drought monitoring is becoming increasingly important in addressing a wide range of societal issues, from food security and water scarcity to human health, ecosystem services, and energy production. This unique book surveys innovative remote sensing approaches to provide you with new perspectives on large-area drought monitoring and early warning.

From reader reviews:

Ginger Knowles:

Do you have favorite book? Should you have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each publication has different aim as well as goal; it means that book has different type. Some people feel enjoy to spend their the perfect time to read a book. They are reading whatever they have because their hobby is usually reading a book. Why not the person who don't like reading a book? Sometime, man or woman feel need book when they found difficult problem or maybe exercise. Well, probably you should have this Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises).

Carol Reck:

People live in this new day time of lifestyle always aim to and must have the extra time or they will get large amount of stress from both way of life and work. So , once we ask do people have time, we will say absolutely of course. People is human not really a huge robot. Then we question again, what kind of activity do you have when the spare time coming to you actually of course your answer will probably unlimited right. Then do you ever try this one, reading books. It can be your alternative within spending your spare time, typically the book you have read will be Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises).

Lynn Kelley:

Is it anyone who having spare time and then spend it whole day by watching television programs or just laying on the bed? Do you need something new? This Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises) can be the solution, oh how comes? It's a book you know. You are thus out of date, spending your spare time by reading in this brand-new era is common not a geek activity. So what these books have than the others?

Sergio Espinoza:

As a scholar exactly feel bored for you to reading. If their teacher requested them to go to the library in order to make summary for some book, they are complained. Just very little students that has reading's heart and soul or real their interest. They just do what the professor want, like asked to the library. They go to right now there but nothing reading significantly. Any students feel that studying is not important, boring as well as can't see colorful pictures on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this period of time, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. Therefore this Remote Sensing of Drought: Innovative Monitoring Approaches (Drought and Water Crises) can make you really feel more interested to read.
