The Neurological Basis of Learning, Development and Discovery: Implications for Science and Mathematics Instruction (Contemporary Trends and Issues in Science Education) Anton E. Lawson

A goal of mine ever since becoming an educational researcher has been to help construct a sound theory to guide instructional practice. For far too long, educational practice has suffered because we have lacked firm instructional guidelines, which in my view should be based on sound psychological theory, which in turn should be based on sound neurological theory. In other words, teachers need to know how to teach and that "how-to-teach" should be based solidly on how people learn and how their brains function. As you will see in this book, my answer to the question of how people learn is that we all learn by spontaneously generating and testing ideas. Idea generating involves analogies and testing requires comparing predicted consequences with actual consequences. We learn this way because the brain is essentially an idea generating and testing machine. But there is more to it than this. The very process of generating and testing ideas results not only in the construction of ideas that work (i. e. , the learning of useful declarative knowledge), but also in improved skill in learning (i. e. , the development of improved procedural knowledge).

From reader reviews:

Georgia Hernandez:

The experience that you get from The Neurological Basis of Learning, Development and Discovery: Implications for Science and Mathematics Instruction (Contemporary Trends and Issues in Science Education) will be the more deep you excavating the information that hide in the words the more you get thinking about reading it. It does not mean that this book is hard to understand but The Neurological Basis of Learning, Development and Discovery: Implications for Science and Mathematics Instruction (Contemporary Trends and Issues in Science Education) giving you excitement feeling of reading. The author conveys their point in certain way that can be understood through anyone who read it because the author of this e-book is well-known enough. This specific book also makes your current vocabulary increase well. So it is easy to understand then can go together with you, both in printed or e-book style are available. We advise you for having this specific The Neurological Basis of Learning, Development and Discovery: Implications for Science and Mathematics Instruction (Contemporary Trends and Issues in Science Education) instantly.

Robert Cobb:

People live in this new morning of lifestyle always make an effort to and must have the time or they will get wide range of stress from both daily life and work. So , when we ask do people have spare time, we will say absolutely indeed. People is human not really a huge robot. Then we consult again, what kind of activity are there when the spare time coming to an individual of course your answer will certainly unlimited right. Then do you try this one, reading textbooks. It can be your alternative with spending your spare time, typically the book you have read is usually The Neurological Basis of Learning, Development and Discovery: Implications for Science and Mathematics Instruction (Contemporary Trends and Issues in Science Education).

George Pinard:

Reading can called mind hangout, why? Because when you find yourself reading a book particularly book entitled The Neurological Basis of Learning, Development and Discovery: Implications for Science and Mathematics Instruction (Contemporary Trends and Issues in Science Education) your brain will drift away trough every dimension, wandering in each and every aspect that maybe unknown for but surely will become your mind friends. Imaging every word written in a e-book then become one web form conclusion and explanation which maybe you never get before. The The Neurological Basis of Learning, Development and Discovery: Implications for Science and Mathematics Instruction (Contemporary Trends and Issues in Science Education) giving you an additional experience more than blown away your brain but also giving you useful data for your better life in this era. So now let us explain to you the relaxing pattern the following is your body and mind will probably be pleased when you are finished looking at it, like winning a sport. Do you want to try this extraordinary investing spare time activity?

Hayden Wolfe:

Reading a book being new life style in this yr; every people loves to learn a book. When you learn a book you can get a lot of benefit. When you read publications, you can improve your knowledge, mainly because book has a lot of information into it. The information that you will get depend on what forms of book that you have read. In order to get information about your study, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, these us novel, comics, in addition to soon. The The Neurological Basis of Learning, Development and Discovery: Implications for Science and Mathematics Instruction (Contemporary Trends and Issues in Science Education) will give you new experience in looking at a book.
